## **Barre City Water Alert March 27, 2023**

At approximately 7:00 AM today, reports of low water pressure were reported in the South Barre area of Vermont Route 14 and surrounding streets. Water Department crews are investigating the situation at this time. Once the cause is determined, crews will work to make the repairs necessary to restore water.

We are unable to anticipate repair timelines at this time. Water may appear discolored once repairs are completed, and we recommend that you run a cold-water faucet for 10 minutes to flush out any sediment if you experience discolored water.
